- Fever
- Chills
- Shortness of breath
- Cough
- Diarrhea
- Abdominal pain
- Vomiting
- Fatigue
- Joint pain
- Muscle aches
- New rash
- Loss of smell or taste
- Sore throat
- Headache
- New congestion
- New runny nose

Close Contact?

Yes

Quarantine at home for 14 days with no in-person contact with others. A negative test cannot shorten a quarantine. If a person starts having symptoms, they should call their doctor and get tested for COVID-19.

Yes: they have have traveled.

Are they currently on minimal interaction status?

No:

They have not been in close contact or been told to quarantine.
Have they traveled out of state in the last 14 days?

No: They have not traveled.

Great! The person does not need to be tested, isolated, or quarantined. A face covering, physical distancing, and all other transmission prevention strategies are recommended.

Returning from Travel

Yes:

They may not attend in-person school, activities, or other school-related in-person events while on minimal interaction status.

No:

They did not get tested (or the adult they traveled with did not get tested) so they are in quarantine status for 14 days.

No:

If has already been 7 days and their second test at 7-14 days has come back negative, so they are off minimal interaction status. They may resume in-person school and activities. A face covering, physical distancing, and all other transmission prevention strategies are recommended.
