

ELECTRICAL APPRENTICESHIP

EARN WHILE YOU LEARN

The Alaska Joint Electrical Apprenticeship & Training Trust offers outstanding opportunities for those interested in a career in the Electrical Industry. The AJEATT offers training in three classifications of the electrical industry. These classifications are:

OUTSIDE POWER LINEMAN:

The lineman is responsible for the transmission and distribution of high voltage power from the generation system to substations or occupancies. This is done either on poles or underground, in all kinds of weather. Their work requires good physical strength and ability to work in a team effort.

COMMUNICATIONS WORKER:

A communications (telephone) worker works with and installs communications equipment from pole line distribution to individual customers to central-office equipment. The work is often in confined spaces and is highly technical. The work may also involve working outside in adverse conditions. All telephone workers must learn to climb poles.

INSIDE WIREMAN:

The inside wireman (Electrician) is the electrical worker who does the electrical work on industrial, commercial and residential occupancies. Work consists of installing conduit, wire, distribution and service panels, lighting fixtures, motors and controls. Much of the work may be outside and involve reading plans, codes and specifications.
